- 10)a) The upper section of the two between A and B.
b) i) 28-x
ii) The number of people who chose archery and cycling but not badminton = $27 - x$
So the number of people who chose archery only is

$$63 - (27 - x) - (28 - x) - x = 8 + x$$

iii) $120 = (\text{number who chose badminton}) + (\text{number who chose cycling}) - (\text{number who chose badminton and cycling}) + (8 + x)$

$$120 = 62 + 69 - 32 + 8 + x$$

 $x = 13.$
- 11)a) A diameter meets a tangent at 90 degrees. $90 - 56 = 34$ degrees
b) $\text{OPR} = 56$ (angle in a semicircle = 90 and $\text{PQR} = 34$)
 $\text{ORP} = 56$ (triangle formed by 2 radii is isosceles)
 $\text{ORT} = 90$ (radius meets tangent at 90 degrees)
 $\text{PRT} = 146$ degrees (add the angles ORP and ORT)
- 12)a) $y = \frac{25}{16}x^2$
